1) COMPOUND PERFUME AND WASHING-SOFTENING AGENT COMPOSITION CONTAINING THE COMPOUND PERFUME

(57)Abstract:

(57)Abstract:
PROBLEM TO BE SOLVED: To provide a compound perfume comprising at least one perfume raw material selected from respective groups consisting of a top note component, a middle note component, and a base note component which are obtained by classifying natural perfumes and synthetic perfumes used as the raw materials of the compound perfume, to provide a method for producing the compound perfume, and to provide a washing-softening agent composition containing the compound perfume.
SOLUTION: This compound perfume is obtained by sensually classifying (attaching a perfume raw material to perfume-sampling paper and then observing how long the smell is retained) the perfume raw materials into a top note component (highly volatile), a middle note component (volatile in a middle degree), a base note component (low volatile), and a mixed note component obtained by mixing the components and then compounding the materials in a specific ratio. By the method, the compound perfume can more easily be prepared than by conventional methods.
